Beginner's Guide to SIH & Hackathon Problem Statements

What is an Internal Hackathon?

Before competing at the national level, your college holds an internal event to screen the best ideas. You must form a team of 6, including at least one female member, all from the same institution.

Proposed Problem Statement Areas

- **E-waste Crisis:** Develop a platform for tracking, collecting, and safely recycling obsolete electronic devices from residential communities.
- **Carbon Footprint:** Create a real-time monitoring tool for small businesses to calculate and offset their carbon emissions.
- **Agri-Crisis:** Use IoT and AI to provide predictive alerts for crop diseases or automated irrigation management.
- **Future Education:** Design an immersive, AI-driven personalized learning path platform for students in remote areas.
- **Monsoon Crisis:** Build an early-warning flood management system using sensor data for urban drainage infrastructure.
- **Extra-terrestrial:** Conceptualize a resource management system for hypothetical long-duration space habitation or moon base logistics.

Quick Tips for Participants

- **The 6-Slide Rule:** Your pitch must be exactly 6 slides in PDF format.
- **Focus on Innovation:** Judges look for "why" this solution is better than existing ones.
- **Technical Feasibility:** Be ready to explain your tech stack (e.g., Python, React, IoT sensors).
- **No Padding:** Use flowcharts and bullet points instead of long paragraphs.
